## INSTRUMENTS & COLLABORATIONS

### The Habitable-zone Planet Finder | Deputy Project Scientist

Near-infrared (NIR) spectrograph on the 10m Hobby-Eberly Telescope. I currently lead the HPF 5-year survey. Using my RV extraction pipeline, we have demonstrated some of the highest RV precision in the NIR (1.5m/s). I led and co-led the design and testing of a number of subsystems (e.g., environmental control system, fiber-feed).

### NEID | Instrument & Science Team Member

The NASA-NSF precision RV spectrograph on the WIYN 3.5m telescope with a  $\sim 30$ -50cm/s RV precision. I led and co-led the design and testing of a number of subsystems. My template matching pipeline has demonstrated  $\sim 50$ cm/s RV precision on nearby stars with NEID. I am currently leading a number of NEID science programs.

### KPF | Science Team Member

I am a member of the science team of the Keck Planet Finder, the next-generation RV spectrograph for the Keck-I telescope.

### Space-Quality Photometry with Engineered Diffusers | NSF-funded collaboration

I have pioneered the use of Engineered Diffusers to achieve some of the highest precision photometry from the ground.
